## SEGGER Embedded Studio now supports DAP-Link

Monheim, Germany – October 23rd, 2019

The latest release of Embedded Studio, SEGGER's cross-platform IDE, can now debug software on evaluation boards equipped with a DAP-Link (CMSIS-DAP) debug interface. This new feature is included in the ARM and Cortex-M editions on all supported host platforms: Windows and Linux 64- and 32-bit, as well as macOS, including Catalina. The software to access the DAP-Link is based on the proven J-Link software, can download directly into flash memory, and is optimized for stability and performance.

While an on-board J-Link delivers superior features and performance, DAP-Link is used on a number of low-cost evaluation boards. Embedded Studio now makes using these boards easy. It simply works, out of the box, hassle-free. One download and install is all it takes.

"Knowing boards with DAP-Link are commonly used by hobbyists and students, we are excited to give them access to our professional IDE and software libraries," says Johannes Lask, Product Manager of Embedded Studio. "This also enables SEGGER and others to create evaluation software projects for Embedded Studio and these boards, in line with our 'It simply works!' philosophy. I believe that Embedded Studio, due to its ease of use and easy licensing, is the best choice for silicon vendors to make reference projects and SDKs available."

Embedded Studio can be downloaded without registration and used free of charge for educational and non-commercial purposes, as well as evaluated without code size, feature, or time limit.

###

About SEGGER

SEGGER Microcontroller has over twenty-five years of experience in Embedded Computer Systems, producing state-of-the-art software libraries, and offering a full set of hardware tools (for development and production) and software tools.

SEGGER provides an RTOS plus a complete spectrum of software libraries including communication, security, data compression and storage, user interface software and more. Using SEGGER software libraries gives developers a head start, benefiting from decades of experience in the industry.

SEGGER's professional software libraries and tools for Embedded System development are designed for simple usage and are optimized for the requirements imposed by resource-constrained embedded systems. The company also supports the entire development process with affordable, high-quality, flexible, easy-to-use tools.

The company was founded by Rolf Segger in 1992, is privately held, and is growing steadily. SEGGER also has a U.S. office in the Boston area and branch operations in Silicon Valley and the UK, plus distributors on most continents, making SEGGER's full product range available worldwide.

Why SEGGER?

In short, SEGGER has a full set of tools for embedded systems, offers support through the entire development process, and has decades of experience as the Embedded Experts.

In addition, SEGGER software is not covered by an open-source or required-attribution license and can be integrated in any commercial or proprietary product, without the obligation to disclose the combined source.

Finally, SEGGER offers stability in an often volatile industry making SEGGER a very reliable partner for long-term relationships.
